2 Exploratory Data Analysis

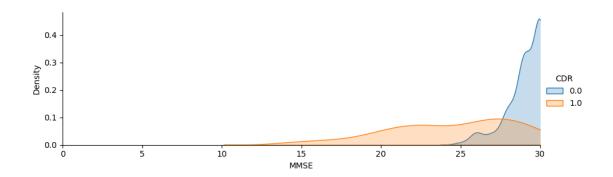

- Distribution of variables
- Exploratory PCAs
- Model implementations
 - Linear regression model with automatic feature selection
 - Automatic ML model selection (RandomforestClassifier)
 - Model testing & Results visualization

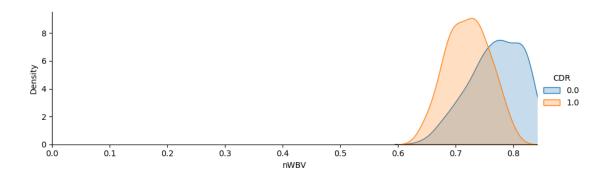

2.1 Distributions

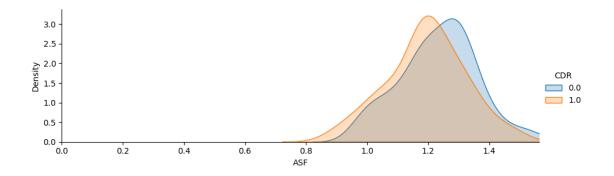

[18]: Text(0.5, 1.0, 'Gender and Demented rate')

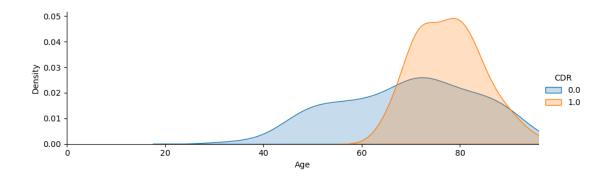

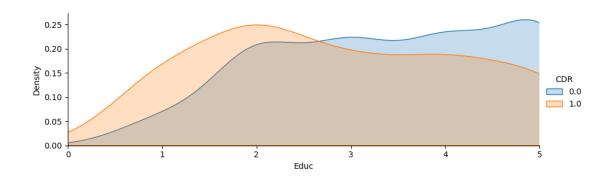

2.2 Exploratory Data analysis – PCAs

- General PCA
- PCA without age
- PCA with social factors only (no results because the dataset is only 2-D)
- PCA with brain measurement factors

Training set shape: (172, 8) (172,)
Test set shape: (44, 8) (44,)

2.2.2 Data2 without Age

Since Age is a huge predictor of Alzheimer's, it is possible that the PCA results were skewed by the Age feature.

So this section tries the entire process without Age

| | M/F | Educ | SES | MMSE | CDR | eTIV | ${\tt nWBV}$ | ASF |

Notes:

- [1] R^{2} is computed without centering (uncentered) since the model does not contain a constant.
- [2] Standard Errors assume that the covariance matrix of the errors is correctly specified.
- [3] The condition number is large, 3.78e+04. This might indicate that there are strong multicollinearity or other numerical problems.
